

FORECAST 2018 SCORECARD AS OF JULY 19, 2018

Although 2018 is not yet over, several forecasts made in the 2018 Forecast Book have already unfolded. We have listed a couple of the forecasts below as of July 19, 2018. Keep in mind these forecasts were written in October-November 2017, and published December 1, 2017 well before 2018 was underway.

- **T-Notes and Interest Rates:** *“Transits of Saturn in hard aspect to the Federal Reserve Board chart indicates monetary tightening by the Fed, driving interest rates higher if the economy is strong, as it is now (heading into 2018) ...The double bottom chart formation (122/25-123/01) is likely only temporary support and will soon break (as)... the 6- and 18-year cycle low is due 2019-2021.”*
 - It broke below support by mid-January, and as of this writing the low has been 118/10 in mid-May.
- **The Stock Market and DJIA:** *“The upside price target for the crest is 22,713 +/- 1917 or 27,252 +/- 2453... The 23-month cycle low is due before the end of June 2018. It will overlap the 50-week cycle that is due by the week ending February 23, 2018 or the week ending April 6, 2018 +/- 12 weeks (depending on starting point used) ... Once the 23-month cycle low is completed, another sizeable rally is due to start.”*
 - The DJIA and S&P topped out on January 26-29 (DJIA at 26,616, in the second price target given.) The S&P and NASDAQ made their 23-month low on February 9, whereas the DJIA did not bottom until April 2 (week ending April 6, as given). Each index then began an impressive rally, with the NADAQ making a new all-time high as of this writing.
- **Gold:** *“Once the 11-month cycle low is completed (due December 1, 2017 +/- 12 weeks) ... with a downside price target of 1243.40 +/- 28.10) ... A key period for Gold to demonstrate that it is bullish arises December 9, 2017 through January 23, 2018... A move above 1310 (will be) followed by 1350-1380...”*
 - The 11-month cycle low formed December 12 at 1238.40, right in the price range given for that low. It then soared to 1365.40 on January 25, into the price target and time

band for a huge rally as given. It did not, however, get above 1380, which would then have put into motion a more bullish projection for the year, per the steps given in last year's book.

- **Dollar/Yen:** *The next 22.5-month cycle trough is due December 2017-September 2018. Since it is the first 22.5-month cycle in the newer 5.5-year cycle, it is likely to exhibit bullish characteristics. My bias is that the Dollar/Yen could test the 118 level, +/- 1.50, without the U.S. Dollar breaking below 103.*
 - The low of the year was 104.55 on March 26, which was a three-star geocosmic critical reversal date (CRD) time band given in Forecast 2018, and the 22.5-month cycle low, right on time. As of this writing in late July 2018, the high has been 113.16 on July 19.
- **British Pound** (by Ulric Aspegren, MMTA Graduate): *“The crest (of the 24-month cycle) would take place May 2018 +/- 7 months. The crest would be followed by a 24-month cycle low (due) May 2018-February 2019... The 24-month cycle crest is estimated to be 1.3905 +/- .1275.”*
 - The high of the year was 1.4386 on April 17, which is only one day before a critical reversal date (CRD) given in the book, and right near the midpoint of the time projected for the high. It was also within the range projected for the price.
- **Corn:** *“There are no geocosmic signatures indicating a drought in 2018, so our bias is that Corn could fall lower below 315, sometime in 2018, unless they can first close above 415. Until it can close above 415, however, Corn is vulnerable to falling as low as 255-310 in 2018-2019 as the 18-year cycle finally ends... However, a close above A-B-C negates this. That line offers resistance this year at 400-415.”*
 - The high of the year was 412 on May 24 (a CRD was given in last year's book for May 23).
- **Soybeans** (by Kat Powell, MMTA Graduate): *“My bias is that the market may need to re-test support in the range of 800-900 before a substantial rally can begin. The current range for the descending pattern is 842 +/- 43... Venus in Virgo will*

form a grand trine involving Saturn in Capricorn and Uranus in Taurus at the time of the solar eclipse of July 13.”

- The low of the year, as of this writing in late July 2018, was right on July 13 (another CRD zone given in Forecast 2018) at 810.
- **Wheat** (by Mark Shtayerman and Izabella Suleymanova, MMTA Graduates): *“The preferable time frame for a 54-week cycle top to occur is May 2018 as Mars conjuncts Pluto and squares Uranus... Also, on May 25,2018, we will get a second passage of Jupiter trine Neptune, which is consistent with the intermediate-term reversals, most likely an intermediate 54-week or even 42-month cycle high.... It may get above 556, but don’t expect it.”*
 - The high of the year as of this writing in late July 2018 has been 554 on May 29, right in the time frame mentioned and price target given.
- **Crude Oil** (by Nitin Bhandari, MMTA Graduate): *“The year 2018 is very special with respect to geocosmic signatures pertaining to crude oil. Both the rulers of crude oil, Jupiter and Neptune, will be in a harmonious trine between December 2017 and August 2018. There is a possibility that crude oil’s 3-year cycle crest may unfold during this period... the inverse head and shoulders pattern was activated, which projects an upward price target of 75.17 +/- 2.89.”*
 - The high of the year was right there, at 75.27, on July 3, right in the Jupiter/Neptune trine time band.

Many of the 2018 Critical Reversal Dates given for various markets have been impressive, and several have coincided with yearly highs and lows so far, such as in the USA Stock Indices, T-Notes, Gold, Currencies, Grains, and Crude Oil – in fact, in every market the low and/or high of the year coincided with a CRD given in the Forecast 2018 Book!
